

AMENDMENTS IN THE SPECIFICATION

Please replace the paragraph beginning on page 9, line 18, with the following:

In one embodiment a modem may be utilized to connect data processing system 100 to a network server via remote access protocols. In yet another embodiment, a network adapter is utilized to connect data processing system 100 or 207 to a Local Area Network (LAN) as depicted in Figure 2.

Please replace the paragraph beginning on page 10, line 1, with the following:

The preferred embodiment of the present invention is concerned with the controlling of access to system console functions on a network using an authentication procedure that not only authenticates the operator each time he/she accesses the console program and the device but also encodes data transmitted during the console session to prevent unauthorized access or interception. As illustrated, network devices ~~[[200]]~~ comprise~~[[s]]~~ a computer system (or server) **203** that includes console control program **204A**, device table **204B**, and user table **204C**. Application of device table **204B** and user table **204C** are described further below. Connected to server **203** are three client systems **207A-207C**. Client systems **207A-207C** comprise data processing system **100** illustrated in **Figure 1**, and may each be utilized as a system console device in the present invention. Client system A **207A** is directly connected to server **203** via local connection **209**. Client systems **207B**, **207C** are connected to server **203** via a network **205**, which may be a LAN or WAN. Connection between server **203** and client systems **207B**, **207C** may be via direct access (e.g., an ethernet with connection lines) or remote access (e.g., wireless access).

Please replace the paragraph beginning on page 8, line 12, with the following:

The present invention makes use of the encrypted key exchange (EKE) algorithm described in United States Patent ~~(Ser. No. 5,241,299)~~ (Ser. No. 5,241,599) entitled "Cryptographic Protocol For Secure Communications," the relevant content of which is hereby incorporated by reference. It is to be understood, however, that the invention may be implemented with other similar encryption algorithms including algorithms yet-to-be developed that utilize the basic framework or functionality of the EKE algorithm, and the references herein

to a specific EKE algorithm should not be construed as limiting the invention to only that algorithm.
